## Question: 1

DRAG DROP

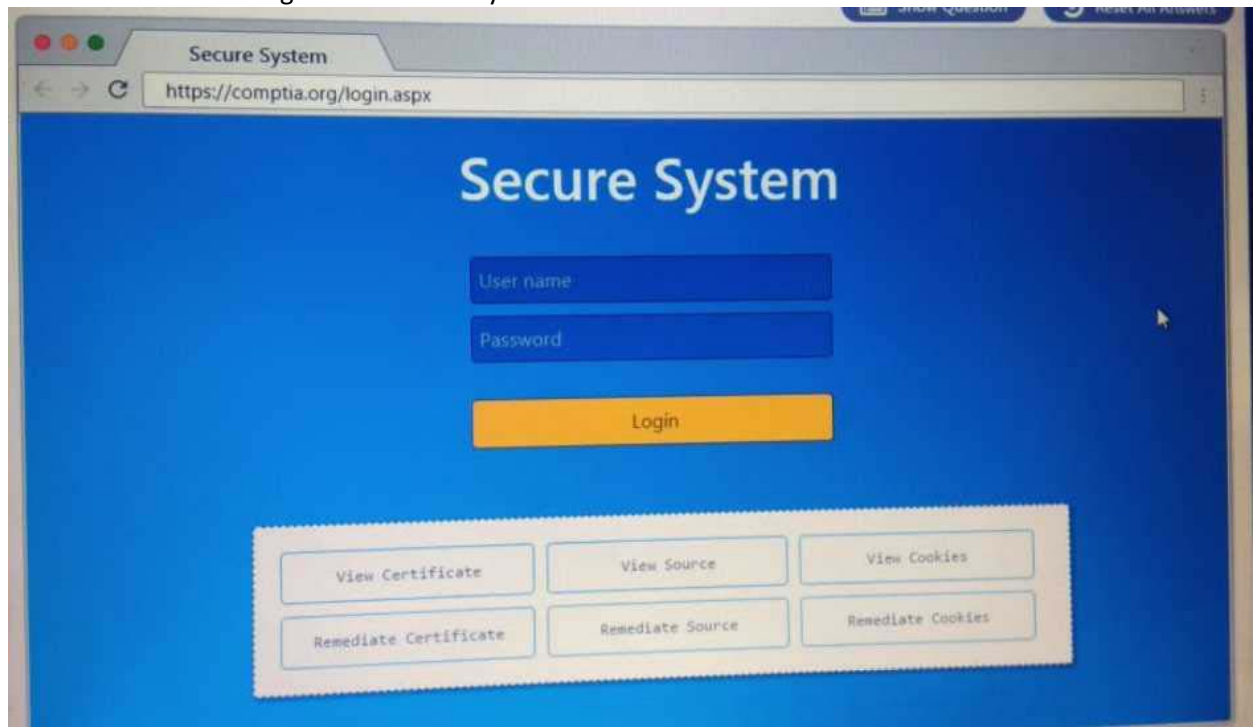

Performance based

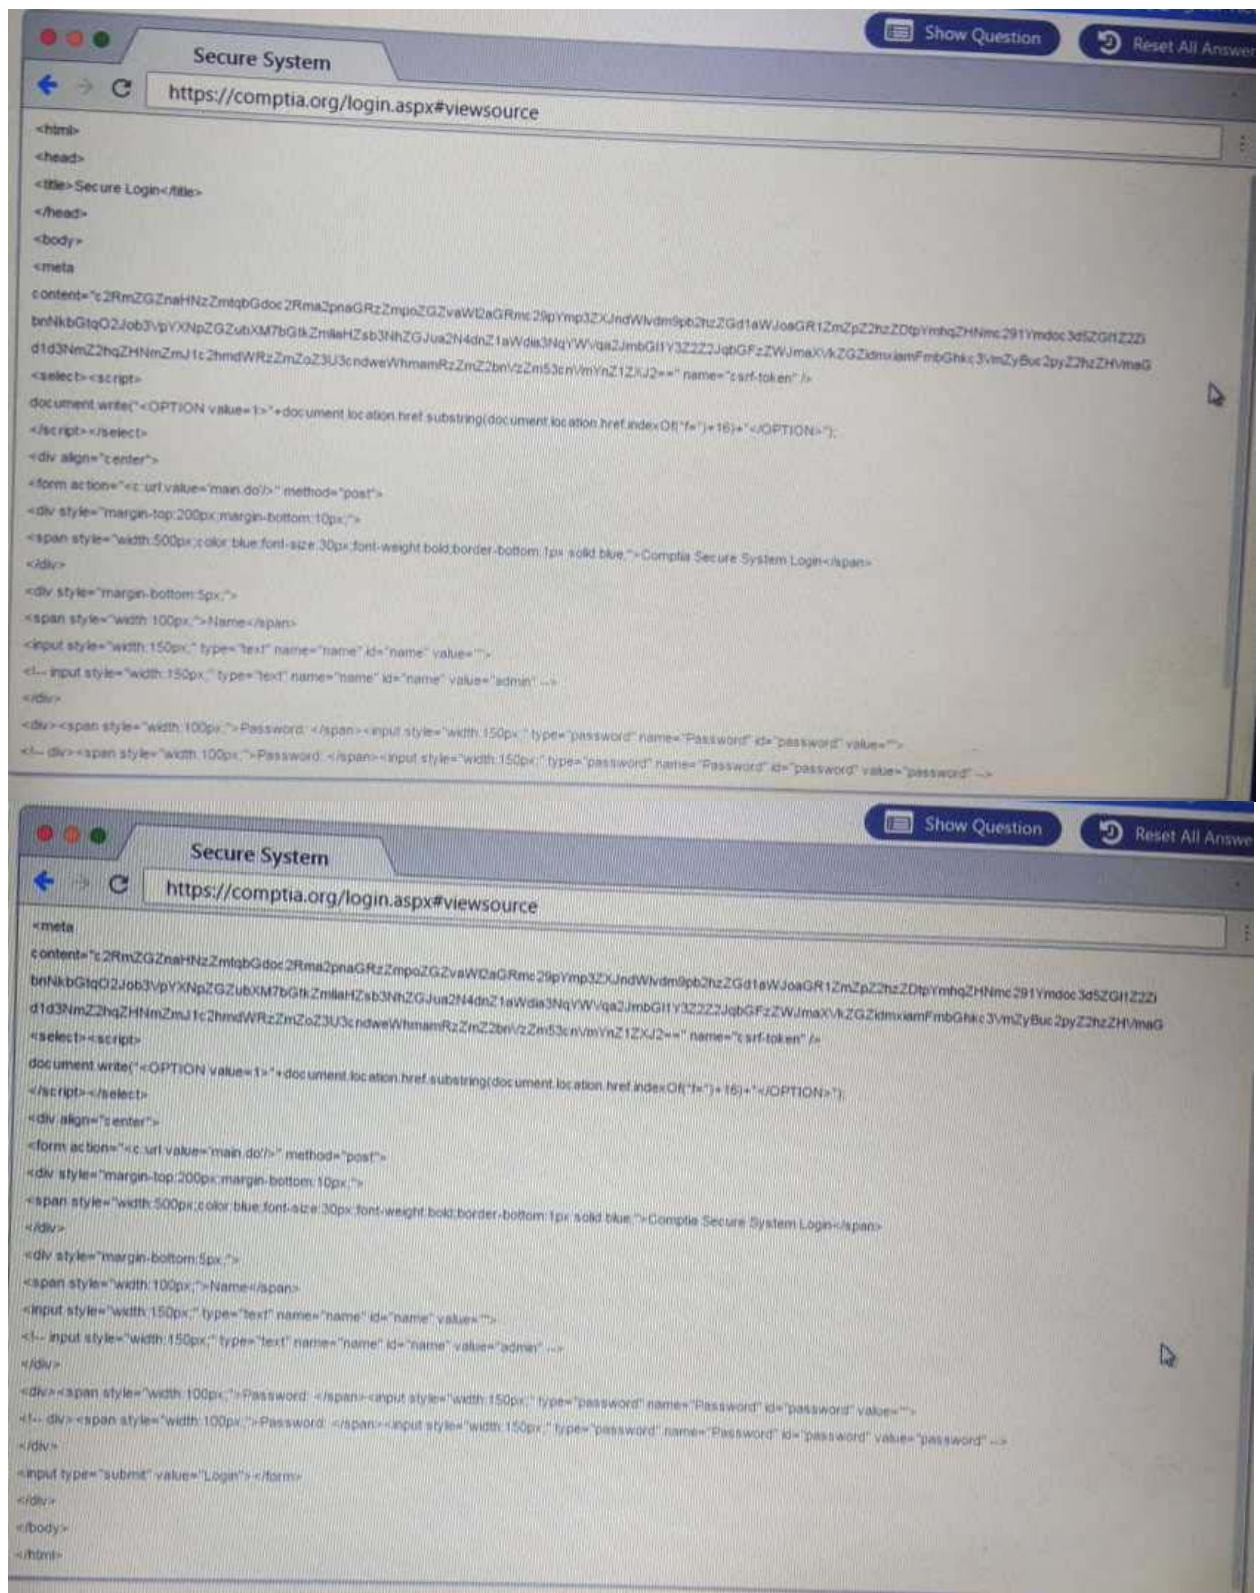

You are a penetration tester reviewing a client's website through a web browser.

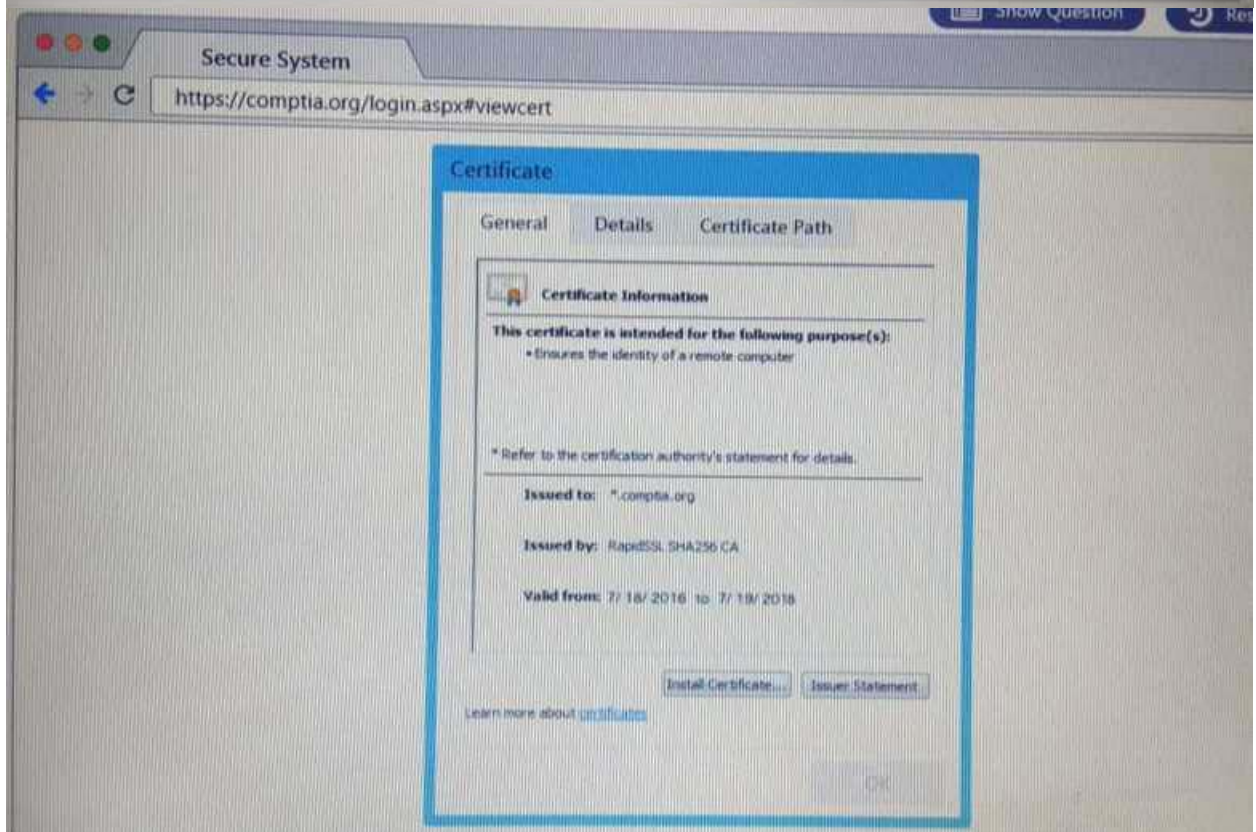

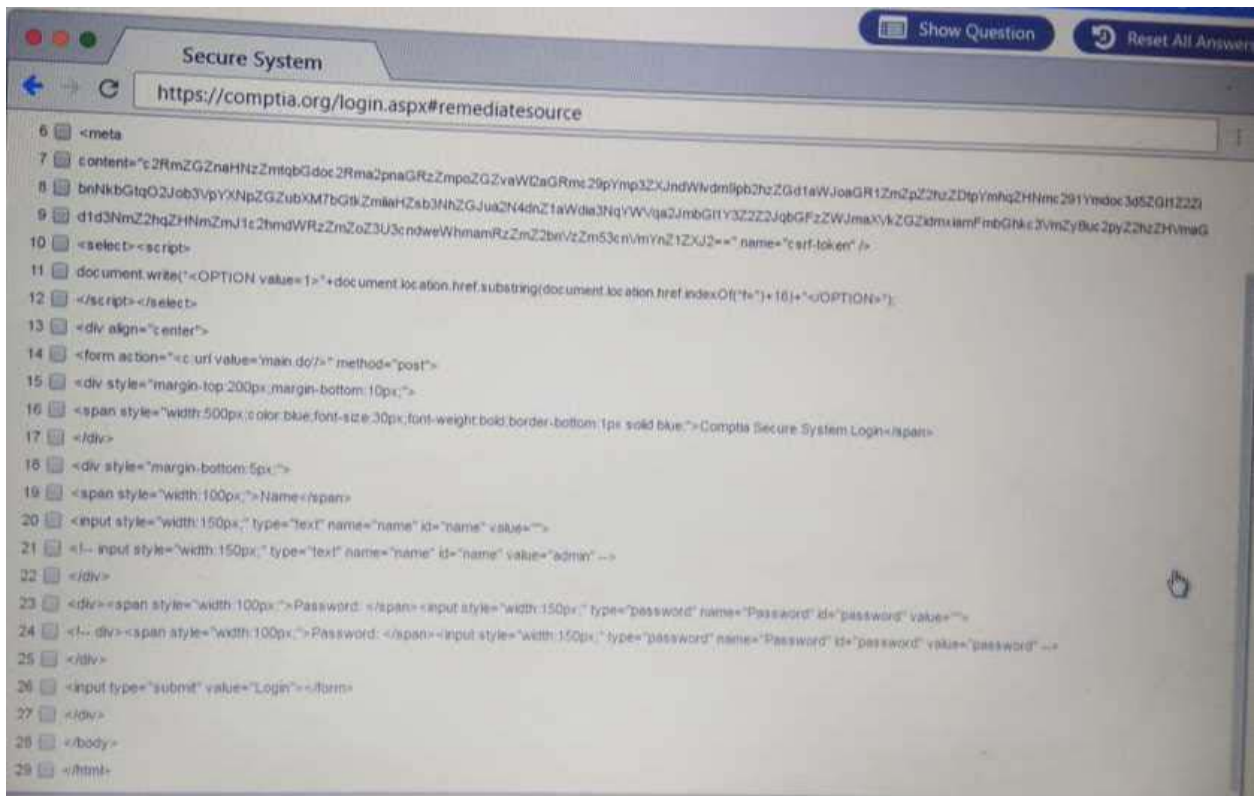

Instructions:

Review all components of the website through the browser to determine if vulnerabilities are present.

Remediate ONLY the highest vulnerability from either the certificate source or cookies.

Secure System

Drag and Drop Options

Remove certificate from server

Generate a Certificate Signing Request

Submit CSR to the CA

Install re-issued certificate on the server

Step 1

?

Step 2

?

Step 3

?

Step 4

?

Answer:

- Step 1 Generate a Certificate Signing Request
- Step 1 Generate a Certificate Signing Request
- Step 2 Submit CSR to the CA
- Step 3 Installed re-issued certificate on the server
- Step 4 Remove Certificate from Server

## Question: 2

DRAG DROP

A manager calls upon a tester to assist with diagnosing an issue within the following Python script:

```
#!/usr/bin/python
```

```
s = "Administrator"
```

The tester suspects it is an issue with string slicing and manipulation. Analyze the following code segment and drag and drop the correct output for each string manipulation to its corresponding code segment.

Options may be used once or not at all.

| Code segment           | Output               |      |      |
|------------------------|----------------------|------|------|
| <code>s[4:8]</code>    | <input type="text"/> | iita | imda |
| <code>s[4:12:2]</code> | <input type="text"/> | inis | nist |
| <code>s[3::-1]</code>  | <input type="text"/> | nsrt | rota |
| <code>s[-7:-2]</code>  | <input type="text"/> | snmA | trat |

**Answer:**

| Code segment           | Output |
|------------------------|--------|
| <code>s[4:8]</code>    | nsrt   |
| <code>s[4:12:2]</code> | snmA   |
| <code>s[3::-1]</code>  | trat   |
| <code>s[-7:-2]</code>  | imda   |

### Question: 3

DRAG DROP

Place each of the following passwords in order of complexity from least complex (1) to most complex (4), based on the character sets represented. Each password may be used only once.

| Least to most complex |                      |
|-----------------------|----------------------|
| 1                     | <input type="text"/> |
| 2                     | <input type="text"/> |
| 3                     | <input type="text"/> |
| 4                     | <input type="text"/> |

zv3rl0ry

Zverlory

Zverl0ry

Zv3r!0ry

---

|                |
|----------------|
| <b>Answer:</b> |
|----------------|

Explanation:

- 1.) Zverlory
- 2.) Zverl0ry
- 3.) zv3rl0ry
- 4.) Zv3r!0ry

### Question: 4

HOTSPOT

Instructions:

Given the following attack signatures, determine the attack type, and then identify the associated remediation to prevent the attack in the future.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

You are a security analyst tasked with hardening a web server.

You have been given a list of HTTP payloads that were flagged as malicious.

| Payloads  | Vulnerability Type   | Remediation   |

## Question: 5

### DRAG DROP

Instructions:

Analyze the code segments to determine which sections are needed to complete a port scanning script. Drag the appropriate elements into the correct locations to complete the script.

If at any time you would like to bring back the initial state of the simulation, please click the reset all button.

During a penetration test, you gain access to a system with a limited user interface. This machine appears to have access to an isolated network that you would like to port scan.

```
Drag and Drop Options

#!/usr/bin/ruby

for SPORT In SPORTS:
    try:
        s.connect((ip, port))
        print("%s:%s - OPEN" % (ip, port))

    except socket.timeout:
        print("%s:%s - TIMEOUT" % (ip, port))

    except socket.error as e:
        print("%s:%s - CLOSED" % (ip, port))

    finally:
        s.close()

run_scan(sys.argv[1], ports)

ports = {21, 22}

for port in ports:
    try:
        s.connect((ip, port))
        print("%s:%s - OPEN" % (ip, port))

    except socket.timeout:
        print("%s:%s - TIMEOUT" % (ip, port))
```

```
Immutables

?

import socket
import sys

?

def port_scan(ip, ports):
    s = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
    s.settimeout(2.0)

?

if __name__ == '__main__':
    if len(sys.argv) < 2:
        print('Execution requires a target IP address. Exiting...')
        exit(1)
    else:
        ?
```

Answer:

Drag and Drop Options

```
