Question: 1

A Dell EMC NetWorker Module for Microsoft VSS-based recovery of a Microsoft SQL AlwaysOn Availability Group must be performed. What is the first step a database administrator must complete prior to recovering the database?

- A. Suspend the replication process between the primary and secondary replicas
- B. Delete the secondary database on the secondary replica server
- C. Remove the target database from the Availability Group
- D. Start the recovery process using the native tools in SQL Server Management Studio

Answer: D

Question: 2

A Dell EMC administrator is configuring a new SAP with Oracle environment. What is a consideration when configuring backups using NMSAP?

- A. Restartable backups are not supported
- B. SAP and Oracle must be deployed on physical servers
- C. Probe-based backups are supported
- D. Only offline Oracle database backups are supported

Answer: C

Question: 3

A Dell EMC NetWorker administrator notices that the NetWorker backups to a Data Domain system are not completing within the backup window. Which best practice can be implemented to improve performance?

- A. Start with 32 save streams per drive and tune by decreasing and monitoring performance
- B. Distribute the backup start times throughout the backup window to balance the load
- C. Disable Client Direct to ensure the backup goes through the storage node
- D. Start the backup start times as close together as possible to complete early in the backup window

Answer: B

Question: 4

A Dell EMC NetWorker customer has Microsoft Windows 2012 R2 Hyper-V clustered servers. They plan to back up the VMs in Hyper-V using NMM. What is an NMM backup requirement for this environment?

- A. Only non-federated backups are supported for Windows server Hyper-V CSV
- B. Disable incremental backups and enable only full backups
- C. Forever incremental backups must be used for AFTD devices
- D. Use NetWorker BBB to create consistent point-in-time snapshots

Answer: B

Question: 5

A Dell EMC NetWorker administrator wants to configure a Microsoft Exchange DAG backup for their environment. Which action should occur to create a user and assign the required privileges?

- A. Manually create the user and only assign the Exchange Admin privilege
- B. Use the NetWorker Management Console
- C. Manually create the user and only assign the Security group membership on the domain controller
- D. Use the NMM Exchange Admin Configuration Tool

Answer: D

Question: 6

A Dell EMC NetWorker backup administrator is planning for the protection of data in a new HR system. The HR department has provided an RPO and RTO for each of the data sources. What does knowing the RPO help to plan?

- A. Backup frequency
- B. Backup level
- C. Backup storage type
- D. Backup storage location

Answer: A

Question: 7

You are assisting a Dell EMC NetWorker backup administrator in configuring a workflow to run an image backup of a VMware virtual machine. What should be configured?

- A. VMware group type and workflow with Backup VMware action
- B. Client for the VM, VMware group type, and workflow with Backup Traditional action
- C. Clients group type and workflow with Backup VMware action
- D. Client for the VM, Clients group type, and workflow with Backup VMware action

Answer: B
