## Question: 1

A network administrator is in charge of a Mobility Master (MM) – Mobility Controller (MC) based WLAN. The administrator has deployed an Airwave Management Platform (AMP) server in order to improve the monitoring capabilities and generate reports and alerts.

The administrator has configured SNMPv3 and Admin credentials on both the MMs and MCs and has created Groups and Folders in the AMP server.

What two additional steps must the administrator do in order to let Airwave monitor the network devices? (Choose two.)

- A. Manually add the Active MM and wait for automatic Discovery.
- B. Map the AMP's IP address with a mgmt-config profile in the MM.
- C. Set the AMP's IP address and Org string as DHCP option 43.
- D. Manually add each MM, MC and Access Point in the AMP server.
- E. Move "New" devices into a group and folder in Airwave.

**Answer: AB**

## Question: 2

A customer wants a WLAN solution that permits Aps to terminate WPA-2 encrypted traffic from different SSIDs to different geographic locations where non-related IT departments will take care of enforcing security policies. A key requirement is to minimize network congestion, overhead, and delay while providing data privacy from the client to the security policy enforcement point. Therefore, the solution must use the shortest path from source to destination.

Which Aruba feature best accommodates this scenario?

- A. Inter MC S2S IPsec tunnels
- B. RAPs
- C. Multizone Aps
- D. VIA
- E. Inter MC GRE tunnels

**Answer: B**

## Question: 3

A company plans to build a resort that includes a hotel with 1610 rooms, a casino, and a convention center. The company is interested in a mobility solution that provides scalability and a service-based

approach, where they can rent the WLAN infrastructure at the convention center to any customer (tenant) that hosts events at the resort.

The solution should provide:

- Seamless roaming when users move from the hotel to the casino or the convention center
- Simultaneous propagation of the resort and customer-owned SSIDs at the convention center
- Null management access upon resort network infrastructure to the customers (tenants)
- Configuration and monitor rights of rented SSIDs to the customers (tenants)

Which deployment meets the requirements?

- Deploy an MM-MC infrastructure with multizone AP's, with one zone for tenant SSIDs.
- Deploy IAPs along with AirWave. and deploy role-based management access control.
- Deploy IAPs with zone based SSIDs and manage them with different central accounts.
- Deploy an MM-MC infrastructure, and create different hierarchy groups for MCs and APs
- Deploy IAPs. and manage them with different central accounts.

**Answer: E**

**Question: 4**

Refer to the exhibits.

**Exhibit 1**

(MC11) [mynode] (config) #show station-table

```

A network administrator wants to allow contractors to access the corporate WLAN named EmployeesNet with the contractor role in VLAN 40. When users connect, they do not seem to get an IP address. After

some verification checks, the network administrator confirms the DHCP server (10.254.1.21) is reachable from the Mobility Controller (MC) and obtains the outputs shown in the exhibits.

What should the network administrator do next to troubleshoot this problem?

- A. Permit UDP67 to the contractor role.
- B. Remove the IP address in VLAN 40.
- C. Configure the DHCP helper address.
- D. Confirm there is an IP pool for VLAN 40.

**Answer: A**

## Question: 5

Refer to the exhibits.

```

A network administrator integrates a current Mobility Master (MM) - Mobility Controller (MC) deployment with a RADIUS server to authenticate a wireless user, the network administrator realizes that the client machine is not failing into the it\_department role, as shown the exhibits. Which configuration is required to map the users into the proper role, based on standard attributes returned by the RADIUS server in the Access Accept message?

- A. aaa server-group Corp-Network  
set role condition Filter-Id equals it-role set-value it\_department
- B. aaa server-group Corp-employee  
set role condition Filter-Id value-of
- C. aaa server-group Corp-employee  
set role condition Filter-Id equals it-role set-value it\_department
- D. aaa server-group ClearPass  
set role condition Filter-Id equals it\_department set-value it-role
- E. aaa server-group Corp-Network  
set role condition Filter-Id equals it\_department set-value it-role

**Answer: C**
