## Question: 1

Denodo Virtual DataPort provides three mechanisms to optimize the execution of queries. Which ones?

- A. Data Movement, Simplification of queries and Memory Swap.
- B. Data Movement, Simplification of queries and Cost-based optimization.
- C. Memory Swap, Simplification of queries and Cost-based optimization.
- D. Data Movement, Search methods and Cost-based optimization.

**Answer: B**

## Question: 2

Which of the following is false?

- A. Clients that connect to Virtual DataPort using the JDBC or the ODBC driver can obtain indexes information.
- B. Indexes defined in the base views are created in the source.
- C. Some business intelligence tools use the indexes defined in Virtual DataPort to generate more efficient queries.
- D. When the cache is enabled for a view and its cache mode is 'Full', the indexes propagated to its derived views and to the ODBC and JDBC clients are the 'Cache indexes' and not the indexes defined in the 'Indexes' tab.

**Answer: B**

## Question: 3

For which data sources should statistics be enabled?

- A. All of them.
- B. None of them.
- C. All of them, except for Multidimensional databases, and WWW data sources.
- D. All of them, except for JDBC and WWW data sources.

**Answer: D**

---

### Question: 4

Regarding the resource manager, what is a plan?

- A. A plan is a condition on the attributes of a session.
- B. A plan is a set of restrictions on SELECT and CALL statements.
- C. A plan is a set of restrictions only on SELECT statements.
- D. A plan optimizes CPU and memory usage for query executions.

**Answer: D**

### Question: 5

The Data Virtualization main uses are:

- A. Agile Business Intelligence, Data Services, Single View Applications, Big Data integration.
- B. Agile Business Intelligence, Advanced Analytics, Agile Application Development, Single Customer Views.
- C. Universal Data Access, Unified Virtual Data Layer, Universal Data Provisioning, Unified Data Governance.
