Question: 1

You are the Inventory Control Supervisor at your employer's East Coast facility. Your employer is a 3PL, and your customer is a large company that is also serviced out of the other 3PL facilities.

As you start the shift, your Inventory Control team members inform you of a significant change in the RF Cycle Counting process. Lost IBLPNs are now updates with a "00" lock code rather than the expected "LL" code.

Which scenario is causing this issue?

Response:

A. You dismiss the concern because a change in the lock code has no impact on either the WMS Cloud or host inventories.

B. Your counterpart at the 3PL's other facility changed one of the cycle counting company parameters and that impacted your workflow for that same company.

C. An inventory team member in the other facility marked a lost case with "00" lock code causing all subsequent lost cases to be defaulted to the same code across all LPNs for all company/facility combinations.

D. While counting LPNs at a location, one of your team members marked a lost case with the new lock code. The new lock code is stored in system memory and applied to all IBLPNs counted as "Lost".

E. One of your inventory team members changed his/her RF parameter default lock code causing the same configuration change to propagate to all users in the facility.

Answer: B

Question: 2

A client can integrate with WMS Cloud by using the input interface. Which three options can be integrated?
(Choose three.)
Response:

A. Item
B. Orders
C. Appointments
D. Loads

Answer: BCD

Question: 3
