Question: 1

Manage Analytics Stories introduces advanced visualization features within SAP Integrated Business Planning for Supply Chain. What are some of the main capabilities of the stories? Note: There are 3 correct answers to this question.

- A. Links to the external URLs can be embedded in the story.
- B. The story is structured around one responsive page
- C. Specific chart and table filters can be applied within the story
- D. Stories must be re-created in each SAP IBP environment.

Answer: A C D

Question: 2

What option is available for the key figure that is enabled for fixing?

- A. Fixing is possible for key figures with negative values
- B. Fixing is possible for a part of key figure value on a certain planning level
- C. You can change a fixed key figure only with administrative rights
- D. Fixing is possible for certain period, including all child values in the hierarchy

Answer: D

Question: 3

You are adding a value-based filter to a planning view. Which of the following conditions apply? Note: There are 2 correct answers to this question.

- A. These filters can be used together with attributes totals in the same planning view
- B. The alerts dashboard is not available if a value-based filter is set for the open planning view
- C. You can add (or delete) planning objects to a planning view after these filters are applied
- D. You can only apply one value-based filter per planning view.

Answer: A C

Question: 4

You need to integrate data from SAP S/4HANA and legacy ERP to SAP IBP. What are the integration tools that you can use with such a setup for data transfer? Note: There are 2 correct answers to this question.

- A. SAP Cloud Integration for data services
- B. SAP Smart data Integration
- C. Core Interface
- D. Real-time Integration

Answer: A B

Question: 5

You create a planning filter using an SAP IBP Fiori app. Which of the following objects can it be applied to? Note: There are 2 correct answers to this question.

- A. Planning view template in the SAP IBP, add-in for Microsoft Excel
- B. Jobs in the Application jobs app
- C. Compare function in the Planning Areas app
- D. Supply chain graph in Supply Chain Network app

Answer: A B

Question: 6

You are modeling co-products in SAP Integrated Business Planning for Supply Chain. What are some of the properties of co-production you need to be aware of? Note: There are 2 correct answers to this question.

- A. The number of co-products that can be defined in the supply model is unlimited.
- B. The output coefficient is time-dependent and should be modeled as a time series
- C. The relationship between main product and co-product is specified in the production source of supply.

D. Co-production can be modelled only by supply optimizer and finite heuristics

Answer: A C

Question: 7

Which Supply Planning processes are part of the tactical Planning level within a Planning Hierarchy? Note:

There are 2 correct answers to this question.

- A. Order Prioritization
- B. Stock Replenishment
- C. Inventory Build and Reduction
- D. Balancing Supply and Demand

Answer: C D

Question: 8

You are evaluating criteria for choosing the solver to support planning for a complex supply What are some of the points that should be reviewed? Note: There are 2 correct answers to this question.

- A. Finite heuristics works with demand prioritization
- B. Push and Pull production models are used by the optimizer
- C. Prioritization of demand elements one by one is achieved by unconstrained heuristics
- D. Planning results can be generated faster by the optimizer.

Answer: A B

Question: 9

Which apps can be enhanced with analytical charts? Note: There are 2 correct answers to this question.

- A. Web-based Planning

- B. Intelligent visibility
- C. Planner Workspace
- D. Dashboards Advanced

Answer: C D

Question: 10

You are implementing SAP IBP for sales and operations and are researching forecast mode algorithms. What are some of the algorithms that can be used? Note: There are 2 correct answers to this question

- A. Data-cleansing algorithms
- B. Trend models algorithms
- C. Sporadic demand models algorithms
- D. Naive models algorithms

Answer: B D
