## Question: 1

What advantage does using a cloud-based platform offer in real-time data retrieval in Big Data?  
Response:

- A. Limited scalability
- B. High-latency data processing
- C. Enhanced data security only
- D. Scalability and flexibility in resource allocation

**Answer: D**

## Question: 2

Why is data redundancy important in offline batch processing systems?  
Response:

- A. To facilitate real-time analytics
- B. For creating interactive user interfaces
- C. To ensure data reliability and fault tolerance
- D. For encrypting sensitive data

**Answer: C**

## Question: 3

In Huawei's Big Data solutions, what role does Hadoop play?  
Response:

- A. Database management
- B. Data visualization
- C. Distributed data processing and storage
- D. Network security

**Answer: C**

## Question: 4

---

In real-time data retrieval, what is the purpose of load balancing?

Response:

- A. To ensure data is evenly distributed across servers
- B. To provide real-time analytics
- C. To encrypt sensitive data
- D. To create interactive data visualizations

**Answer: A**

### Question: 5

In Big Data application development, what is the role of Apache Spark?

Response:

- A. Real-time data processing
- B. Static website hosting
- C. Email server management
- D. Network security enhancement

**Answer: A**

### Question: 6

Which tool is used for distributed storage and processing of large data sets across clusters of computers?

Response:

- A. Hadoop
- B. Oracle DB
- C. Microsoft Excel
- D. Adobe Photoshop

**Answer: A**

### Question: 7

Why is data caching important in real-time stream computing systems?

Response:

- A. To enhance data security

- B. For historical data analysis
- C. To improve data retrieval performance
- D. For data visualization purposes

**Answer: C**

### Question: 8

Which challenge is commonly associated with real-time data retrieval?  
Response:

- A. High-latency
- B. Scalability to handle large data volumes
- C. Limited data variety
- D. Simplified data processing

**Answer: B**

### Question: 9

Why is data governance important in Big Data application development?  
Response:

- A. For graphic design purposes
- B. To manage and secure data effectively
- C. For enhancing the speed of the network
- D. To manage email servers

**Answer: B**

### Question: 10

What type of data processing does MapReduce primarily support?  
Response:

- A. Real-time processing
- B. Interactive processing
- C. Batch processing
- D. Stream processing

**Answer: C**
